Most current processes and systems repeat the same basic processes and service the same families, yet operate essentially separate from one another. **In contrast, Revolve uses a holistic approach:**

- ✦ Provides reporting, outcome tracking, and analysis of clinical and financial information for programs, services or client.
- ✦ Allows you to screen, qualify and enroll a client into all appropriate programs in *one integrated on-line process.*
- ✦ Simplifies the application preparation and review process. *One request* shares what's already available about a family or individual.
